

**Anglia Ruskin University –  
Institute of Health and  
Social Care**

Roger Parker Associates were involved with a team including Ridge Architects and SDC Builders to design and construct this new facility for the University of East Anglia as part of the formation of the New Rivermead Campus in Chelmsford.

Early and detailed thermal analysis was carried out to validate a natural ventilation strategy, including night-time cooling.

This resulted in a robust, low energy, flexible building providing enhanced sustainability for the overall project.

The £4m five-storey building is used to train professionals in the health care sector and includes eight functional mock hospital wards together with seminar and administration accommodation.

The building opened on time and within budget in early Summer 2007
