

The Technology Partnership

One of the most successful of the Cambridge Technology Companies, TTP's expansion led to a need for a new corporate headquarters on their Melbourn Science Park Site. The 4000m² building was to house their main administration functions and include adaptable space for unspecified R&D activities. RPA worked with architects Bland Brown & Cole on a two storey naturally ventilated design.

The first floor made use of natural light through a glazed roof which also provided stack ventilation to the largely open plan offices. A heat pump system provides heating and limited summer cooling. The ground floor was constructed as an adaptable expansion space suitable for both offices and R&D use. The 3.5m floor to slab height allowed for addition of services or finishes to suit the related function. The building was completed in 2000 and is now fully occupied and fitted out.
