

## **University of East Anglia – BMRC Building**

Following successful completion of the UEA Sportspark project, RPA again worked in partnership with Main Contractors, Willmott Dixon and services sub-contractor, Emcor Drake & Scull to provide design co-ordination and commissioning management services on this £12.5M project. The building is a complex laboratory facility with DMU, CL2 and CL3 areas.

The building is linked to existing combined heat and power plant and has extensive mechanical and electrical servicing with two main plantroom and walk-on ceiling service voids.

To ensure effective and timely handover of the facility, RPA's commissioning programme spanned 18 weeks and identified over 500 linked activities.

The project was completed in early 2005.
